

Aleksander Borodin

Agentic / Embedded AI Developer

apdorodin765@gmail.com +7 908 971 16 97 github.com/aleksanderborodin
aleksanderborodin.github.io

Summary

MIPT student and AI developer focused on LLM systems, RAG, multi-agent workflows, model evaluation/safety, and applied optimization. Build working AI tools: backend services, LLM integrations, evaluation loops, dashboards, and research prototypes.

Education

Bachelor's degree, Applied Mathematics and Physics

2023–2027

FPMI MIPT, in progress; GPA 7.8/10

Coursework: mathematical analysis, probability, linear algebra, algorithms, computational complexity, ML, physics, economics.

Professional Experience

Product / AI Engineer

Jan–May 2026

ModelGate.ru – LLM API gateway and proxy service

- Built core platform functionality end to end, including API routing, the public website, and domain setup.
- Worked extensively with LLM provider APIs and integrated smart-router functionality for model/provider selection.
- Made product design choices across user flows, positioning, and service behavior. Stack: Python, LLM APIs, product design.

Model and Algorithm Developer

Sep 2024–Feb 2025

Regional Bank, client project

- Developed and simulated a cash collection optimization algorithm; historical-data analysis projected a 20M RUB annual profit increase.
- Built a CBR web-scraping/analysis pipeline for data unavailable via API, plus an internal document Q&A RAG system.
- Stack: Python, NumPy, Pandas, RAG, web scraping.

Projects

Idea Evolve

2026

github.com/aleksanderborodin/idea_evolve

- Evolutionary multi-agent framework: specialized Claude agents work in parallel across generations and build a shared knowledge base.
- Improved Sidon set search from 66 to 105 elements in 7 autonomous generations, passing the $\sqrt{N} \approx 100$ reference for $N = 10000$.
- Implemented role-specialized agents, resumable filesystem state, evaluation/knowledge extraction, and a Flask run-inspection dashboard.
- Stack: Python 3.12+, Claude Code CLI, OpenCode, Anthropic API, Flask, multi-agent orchestration.

Prefix Injection Jailbreak

2025

github.com/aleksanderborodin/prefix_injection_jailbreak

- Researched Choice-Blindness-inspired prefix attacks on LLMs; templates made Gemini 2.5 Pro and DeepSeek R1 complete harmful MaliciousInstruct prompts with near-100% success vs. near-zero baseline.
- Stack: Python, LLM APIs, model evaluation, prompt/context engineering.

Yoola Explain

2025

github.com/aleksanderborodin/yoola_explain

- Browser extension that extracts Terms of Service text and returns structured LLM summaries: key points, data collection notes, and warnings.
- Added multi-language support and caching. Stack: JavaScript, FastAPI, OpenRouter, LLM APIs.

Skills

Programming Python advanced; C++ intermediate; C and Assembler basic code reading.

Data / ML PyTorch basic; NumPy; Pandas; PostgreSQL; Matplotlib; ClearML; Excel.

NLP / LLM BM25; embeddings; RAG; LLM APIs; evaluation; prompt/context engineering; jailbreak testing.

Agentic tools Claude Code CLI; OpenCode; multi-agent orchestration; filesystem-based workflows.

Backend / systems FastAPI; Flask; LangChain; LangGraph; Linux home server administration and workstation usage.

Languages Russian native; English B2+ certified by MIPT placement test.
